

**BPS Resolver\*Ballot** is the world's most popular workshop application. BPSR Ballot uses anonymous keypad voting to enable participants to provide opinions on any number of risks, controls, and other critical processes.

## Vote. Discuss. Improve.

**BPS Resolver\*Ballot** is used by three of the big four accounting firms and by hundreds of organizations in 35 different countries. Why? Because **Resolver\*Ballot** allows you to gather information and reach conclusions quickly and effectively, ensuring your workshop runs smoothly.

Begin by presenting risks to workshop participants using a projector. The application allows you to quickly tweak or change information to ensure a common understanding in the room.

As you progress through your meeting, vote results are gathered anonymously using wireless keypads and the results are displayed real-time on a projector. The anonymous assessment ability allows opinions to emerge that would typically remain hidden—essentially removing the blinders that are often created through politics and groupthink.

**BPSR Ballot** will analyze the results of the voting to quickly identify areas that need further discussion, and after new information is shared with the group, you can re-vote to capture the new informed opinion.

Repeat this process as needed to get a deep understanding of impact and likelihood of specific risks facing the organization.

The **BPSR Resolver\*Ballot** approach ensures there is structure to the workshop, making the session time-efficient, and ensuring that results are quantitative, enabling effective comparison and prioritization between risks and/or controls.

Upload results into **BPSR GRC Cloud**—our flagship GRC reporting software—to test controls and assess each piece of your organization's GRC program.

BPSR has a world-leading staff of facilitators. Many clients have their own **BPSR Resolver\*Ballot** hardware and software but prefer to have the expertise of our team to ensure a smooth RCSA session. Our team is available to facilitate sessions anywhere your team requires. Contact us to book your session.
