# PCI Compliance Manager

**BPS Resolver PCI Compliance Manager** helps you manage PCI compliance centrally, easily, and securely. Our PCI Compliance Software simplifies PCI assessments by capturing assets, requirements, vulnerabilities, gaps and actions all in one application.

**More than just technology:** The requirements and testing procedures have been combined with simple assessment templates to make sure you can quickly move through your assessment capturing all the critical information. This allows you to quickly assess in-scope assets, and benefit from pre-built reports and analytics which summarize areas of strength and weakness.

**PCI Compliance** is a simple task, and there are a large number of PCI specific solutions in the market that range from document templates to simple web checklists. **PCI Compliance Manager** offers the same ease of use, but allows you to leverage the overlap between PCI, ISO 27002, COBIT and other IT Governance frameworks. Create efficiencies by testing once, and reporting across all standards.

- Real-time executive dashboards show you where you are in your assessment, how you are managing gaps, and what your next step should be
- Use the One-click "Report on Compliance (ROC)" to quickly present findings in the industry standard format
- Integrated workflow, canned reports, and automatic notifications will help you manage gaps, timelines, and remediation easily.
- Leverage overlap and reduce re-work by combining IT compliance initiatives that feature similar requirements.
- Use one tool to track and contrast multiple assets, with different key contacts and areas of responsibility
- Use pre-built templates and reports to quickly start work and get results
- Establish a compliance program that is repeatable and does not require extensive maintenance and re-work year after year.
